

NEW *High Performance*

IAC Wooden Grain Steel Acoustic Doors

IAC Bulletin WGSAD/4.10

IAC's amazing new Powder Coated Wood Grain finish now allows clients the ability to select the ultimate finish for a supreme Acoustic Door with a performance of up to Rw63dB; way beyond what a "real" timber door could ever provide.

The sublimated process transfers textured low gloss powder through a carrier resulting in a textured and realistic finish. The 80 micron full depth application means the process provides a layered and durable finish, unlike conventional film products.

Seeing is Believing!
